

APPLICATION TESTING REPORT

Feedback App | Attendance App | Assessment App | Video Lessons App

Tested By: Shahid
Date: May 2026

1. EXECUTIVE SUMMARY

This document presents the results of manual functional testing conducted on four application modules: Feedback App, Attendance App, Assessment App, and Video Lessons. A total of 24 test cases were executed. 19 test cases passed successfully, while 5 test cases related to the Assessment App could not be executed due to missing access credentials. Several bugs and improvement suggestions were identified and are documented below against each test case.

2. TEST SUMMARY

Module	Total Tests	Passed	Not Executed
Feedback App	7	7	0
Attendance App	6	6	0
Assessment App	5	0	5
Video Lessons	6	6	0
TOTAL	24	19	5

Key Findings:

- All core features of Feedback App, Attendance App, and Video Lessons are functional.
- GPS/location capture is inconsistent in offline mode observed in both Feedback and Attendance apps.
- Assessment App testing was blocked due to lack of coordinator and student login access.
- Multiple UX improvement suggestions identified across modules to improve data accuracy and teacher experience.

3. MODULE: FEEDBACK APP

TC-01 Feedback App — Login	
Status	Pass
Expected Result	User logs in successfully
Tester Remarks	Login successful with the provided phone number and PIN.

TC-02 Feedback App — School Type	
Status	Pass
Expected Result	Subjects auto-load correctly
Tester Remarks	School type and level selection is working. Subjects load automatically after selection.

SUGGESTION: For Elementary level, school is divided into Grade 6, 7, and 8. Suggest adding sub-level selection to make validation and tracking easier.

TC-03 Feedback App — Attendance Validation	
Status	Pass
Expected Result	Green bar for balanced numbers
Tester Remarks	Attendance validation works. Green bar appears for balanced numbers.

SUGGESTION: Suggest: (1) Round attendance numbers to 100. (2) Add an auto-clear feature so old numbers are automatically cleared when new numbers are entered, instead of requiring manual deletion.

TC-04 Feedback App — Technology & Assembly	
Status	Pass
Expected Result	Selections saved correctly
Tester Remarks	Toggle for LMS/Technology/Assembly is working and selections are saved.

BUG REPORTED: When 'Technology Used: Yes' is selected, sub-options (projector, laptop, etc.) appear but are NOT clickable. This is a bug these items should be clickable.

TC-05 Feedback App — Subjects Entry	
Status	Pass
Expected Result	All subject fields accept input
Tester Remarks	All subject tabs accept input correctly.

SUGGESTION: Add dropdown lists for Unit Names, Unit Numbers, and Lesson Numbers so teachers can select instead of manually typing. This reduces human error and improves tracking accuracy.

TC-06 Feedback App — Photo Upload	
Status	Pass
Expected Result	Photo uploads successfully

Tester Remarks	Both camera capture and gallery upload are working. App correctly accepts only images.
-----------------------	--

SUGGESTION: *Add a guide/sample image so teachers know the correct photo format and angle required.*

TC-07 Feedback App — Offline Mode	
Status	Pass
Expected Result	Data saves offline and syncs later
Tester Remarks	Offline mode is working properly — data is saved and synced when online.

BUG REPORTED: *GPS/location fetch is inconsistent in offline mode — sometimes location is captured and sometimes it is not. Needs investigation.*

4. MODULE: ATTENDANCE APP

TC-08 Attendance App — Login	
Status	Pass
Expected Result	User logs in successfully
Tester Remarks	Login is working using the attendance page credentials.

BUG REPORTED: *BUG: After entering PIN, the new attendance page does not open on a separate screen. The student list loads below the PIN field on the same page. Similarly, after submitting attendance, the confirmation also shows on the same page with the PIN still visible at the top. A video recording of the issue has been attached for reference. This navigation/routing bug needs to be fixed.*

[ATTENDANCE APP.mp4](#)

TC-09 Attendance App — Load Students	
Status	Pass
Expected Result	Student list appears
Tester Remarks	Students registered via the 'Register Student' option automatically load in the app.

TC-10 Attendance App — Mark Attendance	
Status	Pass
Expected Result	Status colors update correctly

Tester Remarks	Attendance marking (Present/Absent/Leave) is working and status colors update correctly.
-----------------------	--

SUGGESTION: Add an 'Absence Reason' or 'Leave Type' option when marking a student Absent or on Leave, so reasons can be recorded for tracking.

TC-11 Attendance App — Quick Mark	
Status	Pass
Expected Result	All students marked present
Tester Remarks	'All Present' button works correctly and marks all students as present.

SUGGESTION: Currently only 'All Present' quick-mark option is visible. The 'All Absent' and 'All Leave' options also work when tested but are not shown. Consider whether these should remain hidden or be shown — currently 'All Present' alone seems sufficient.

TC-12 Attendance App — Submit Attendance	
Status	Pass
Expected Result	GPS captured successfully
Tester Remarks	Attendance submission works and GPS is captured when online.

BUG REPORTED: GPS location is not always captured consistently during offline submission.

TC-13 Attendance App — Offline Mode	
Status	Pass
Expected Result	Attendance syncs when online
Tester Remarks	Offline mode works — data is stored locally and syncs automatically when mobile data is turned on.

BUG REPORTED: Location recording is inconsistent — GPS is not always captured or displayed correctly.

5. MODULE: ASSESSMENT APP

NOTE: All 5 Assessment App test cases could not be executed due to lack of coordinator and student login credentials. Access was requested but login details were received via WhatsApp after testing was completed. These tests are marked as 'Not Executed' and must be re-tested in the next cycle.

TC-14 Assessment App — Generate PIN	
Status	Not Executed
Expected Result	PIN generated successfully
Tester Remarks	Coordinator generates a PIN for assessment.

BUG REPORTED: *No coordinator access available. Access was requested — credentials received via WhatsApp after testing concluded.*

TC-15 Assessment App — Student Login	
Status	Not Executed
Expected Result	Assessment starts correctly
Tester Remarks	Student enters PIN and name to start assessment.

BUG REPORTED: *Student login PIN was not available and could not be created without coordinator access.*

TC-16 Assessment App — MCQ Attempt	
Status	Not Executed
Expected Result	Correct answers highlighted
Tester Remarks	Student answers MCQs and correct answers are highlighted.

TC-17 Assessment App — Assessment Completion	
Status	Not Executed
Expected Result	Score displayed successfully
Tester Remarks	Student completes all subjects and score is displayed.

TC-18 Assessment App — Offline Assessment	
Status	Not Executed
Expected Result	Results sync after internet restored
Tester Remarks	Student attempts assessment offline and results sync after internet is restored.

6. MODULE: VIDEO LESSONS

TC-19 Video Lessons — Load Videos	
Status	Pass
Expected Result	Videos load successfully
Tester Remarks	Videos (MP4) load successfully. The app correctly accepts only video files — images and audio are rejected.

TC-20 Video Lessons — Filter Videos	
Status	Pass
Expected Result	Correct videos displayed
Tester Remarks	Subject and unit filters are working.

BUG REPORTED: BUG: *When selecting Subject and Level but no Unit (only 'All Units' appears in the unit dropdown), videos matching the subject and grade do not display and an error is shown. Also, when a video is uploaded with the correct naming format, the app auto-detects subject, grade, and unit — this is good functionality.*

SUGGESTION: *Ensure the Unit filter shows proper unit names. Also investigate why filtered videos do not match selected subject/grade in some cases.*

TC-21 Video Lessons — Play Video	
Status	Pass
Expected Result	Video plays correctly
Tester Remarks	Videos play correctly. A warning message is shown if the video is closed before completion.

TC-22 Video Lessons — Skip Block	
Status	Pass
Expected Result	Fast-forward blocked
Tester Remarks	Fast-forward is blocked. Users can only pause, minimize, maximize, and adjust volume.

TC-23 Video Lessons — Completion Log	
Status	Pass
Expected Result	Completion logged successfully
Tester Remarks	Watching the full video marks the lesson as completed. A 'Watch Again' option appears. Completion is logged successfully.

TC-24 Video Lessons — Offline Mode	
Status	Pass
Expected Result	Videos work and logs sync later
Tester Remarks	Videos work offline same as online. All completion logs sync after reconnection.

7. BUGS & ISSUES SUMMARY

TC#	Module	Area	Issue Description
TC-04	Feedback App	Technology	Sub-options (projector, laptop, etc.) appear when Technology Used=Yes but are not clickable
TC-07	Feedback App	Offline/GPS	GPS location not consistently captured in offline mode
TC-08	Attendance App	Navigation/UI	After PIN entry, attendance page loads on same screen instead of opening new page. Same issue after submission.
TC-12	Attendance App	GPS	GPS location not always captured during offline submission
TC-13	Attendance App	GPS	Location recording inconsistent — GPS not reliably shown after sync
TC-20	Video Lessons	Filters	Videos do not display when filtering by subject grade without a unit; error shown instead

8. IMPROVEMENT SUGGESTIONS

TC#	Module	Suggestion
TC-02	Feedback App	Add Grade 6/7/8 sub-level selection under Elementary school type for better tracking
TC-03	Feedback App	Auto-clear old attendance numbers when entering new values; round totals to 100
TC-05	Feedback App	Add dropdowns for Unit Name, Unit Number, and Lesson Number to reduce manual entry errors
TC-06	Feedback App	Display a sample/guide image showing the required photo format for uploads
TC-10	Attendance App	Add Absence Reason and Leave Type fields when marking students Absent or on Leave
TC-11	Attendance App	Review visibility of All Absent and All Leave quick-mark buttons
TC-20	Video Lessons	Populate Unit filter dropdown with actual unit names; fix filtered video display error
